Ankur Roy Chowdhury

3902 College Main Street, Bryan, Texas 77801
979.703.9919 • ankurrc.academia@gmail.com • ankur-rc.github.io

EDUCATION

TEXAS A&M UNIVERSITY
MS in Computer Science
May 2019 | College Station, TX
GPA: 3.83 / 4.0

GGSIP UNIVERSITY
B.Tech in Computer Science & Engineering
May 2015 | New Delhi, INDIA
GPA: 3.77 / 4.0

COURSEWORK

Machine Learning
Reinforcement Learning
Deep Learning & Applications
Computational Photography
Artificial Intelligence
Information Retrieval
Speech Processing
Algorithms: Analysis & Design
Advanced Computer Architecture

SKILLS

Programming
Python • C++ • Java

Machine Learning
Sci-kit • Tensorflow • Keras • Caffe*

Numerical Solving
Numpy • Scipy • Eigen* • Ceres

Computer Vision
OpenCV • PCL • Open3D*

Robotics
ROS • Gazebo • Carla Simulator

Web Stack & IoT
Spring • Kafka • MQTT • AngularJS

*familiar

EXPERIENCE

DMI, INC. | Software Engineer - Internet of Things
July 2015 - July 2017 | Haryana, INDIA

- Part of Advanced Solution Group. Only 3 new college grads inducted.
- Worked on developing an IoT analytics platform from scratch, based on the Cloudera stack.
- Full stack developer for B2C app designed as a technology demonstrator for the IoT platform. Designed the data model on MySQL, developed REST services on Spring framework and also developed the frontend on AngularJS.
- Regularly setup application demos for prospective clients.
- Also worked on developing an emulator for debugging apps developed for General Motors' infotainment unit.

SOFTURA | Software Engineering Intern - Computer Vision
May 2018 - Aug 2018 | Farmington Hills, MI

- In-charge of developing a POC on face-recognition based authentication system.
- Conducted thorough analysis of various algorithms and documented them.
- Developed solution using Deep Metric learning, a One Shot learning method.
- Created a Python package for end-to-end usage - from dataset preparation to model training.
- Also developed an AWS Lambda function to deploy the trained deep model on Amazon DeepLens.

RESEARCH

TEXAS A&M ENGG. EXPERIMENT STATION
Robotics Researcher
Sept 2018 – Present | College Station, TX

- Worked at **Unmanned Syatems Lab** led by **Prof Srikanth Saripalli** on autonomous ground vehicles.
- Mostly involved with the development of perception algorithms for PACMod-enabled Polaris GEM e6.
- Also, briefly worked with PerceptIn Dragonfly - a TX1 powered multi-stereo camera.
- Currently, working on a project to derive driving policies from visual space.

PROJECTS

Vehicle Control using Deep Reinforcement Learning

- Used an actor-critic algorithm - DDPG, to train a deep network that enabled a vehicle to follow lanes. The training was performed on the Carla simulator. [**code**][**report**]

UAV path planning using Local Hill Climbing

- Used a meta-heuristic algorithm to plan a path based on a probability density map representing the likelihood of finding a missing person. [**code**][**video**]

More projects can be found at *ankur-rc.github.io*.

[1] Authorized to work in the US through the OPT program.
